Web View: Your Health Information Online & Communicate with Your Doctor

Use the World Wide Web to securely access your personal health information

Web View is an added service that I am offering to my patients. You do not have to sign up for Web View to continue to be my patient. However, this is something I think you will find very useful.

With Web View, you can access parts of your medical record online, from any internet enabled computer.

Web View allows you to see your laboratory results, electrocardiograms (EKGs), letters regarding your laboratory results, current prescriptions, allergies to medications, major problem list, vital signs (including weight), health maintenance, past medical history, family history, social history and referrals.

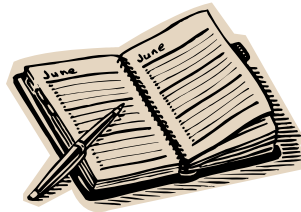

Web View also now allows secure communications between doctor and patient (see next section)

New! Use Web View to Send Me Messages

Web View now allows you to safely send me a message directly. This is a secure method (it is encrypted) to allow you to directly communicate with me. Send me a question about any health issue you may have. I will get back to you electronically. Perhaps there is something you've seen or read and have a question about. Rather than call the office or make an appointment, you can use Web View to send me a message.

Is Web View Secure?

Web View uses the latest security protocols available. You will be given a user name and password to access your information. You can only view your information with a unique user name and password. None of your information is transmitted to any third party. You should keep your user name and password for yourself. I encourage you to have your own email address. If

Web View is available to you 24 hours a day, 7 days a week, from any internet enabled computer

you do not, you may have another person get access to your user name and password. They may also be able to find out when you have had

tests done. However, you will **NEVER** get results or specific health information in your email inbox. You **must** to sign in to Web View to access that information.

Is it Expensive?

I've decided to make Web View inexpensive. The cost is \$15/year. That's \$1.25/month.

How Does it Work?

You must have a working email to use Web View. After you sign up, you will be given your user name and password. You will also be given instructions on how to log on to Web View.

When you first log on to Web View, you will see if there are any new comments on your laboratory or radiology results from me. You have immediate and easy access to the parts of your health record. You can also message me directly from Web View.

You cannot add anything to your record, it is "view only". However, if you see a mistake in your current medication or allergies, for example, you can request that the mistake is corrected.

When you have laboratory work or an imaging test done, you will get an email telling you that you have a result ready to see in Web View.
